PROFESSIONAL SUMMARY

Senior Frontend Engineer with ~5 years of experience building high-throughput, large-scale web applications at **PhonePe** and **OLA**. Expertise across React, Next.js, TypeScript, Redux, performance optimization, frontend architecture, and comprehensive testing infrastructure. Proven track record of reducing bundle overhead, implementing modular code patterns, and engineering reusable UI systems that maximize developer velocity.

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), TypeScript, HTML5, CSS3, Sass
Frontend:	React, Next.js, Redux, Context API, Tailwind CSS, Material-UI (MUI)
Backend & Infra:	Node.js, REST APIs
Testing & Tools:	Jest, Playwright, Cypress, Git, GitHub, GitLab CI/CD, Webpack, Vite, New Relic, Sentry
Practices:	Data Structures & Algorithms (DSA), Performance Optimization, Web Accessibility (WCAG 2.1), A/B Testing, Agile (SCRUM)

PROFESSIONAL EXPERIENCE

Software Engineer @ PhonePe

Mar 2024 – Present | Bengaluru

- Led the migration of the core merchant dashboard—serving **5M+ active merchant partners**—from Material-UI (MUI) to an internal UI library built on **Tailwind CSS**, successfully reducing frontend bundle size by **12%** and cutting component setup time by **25%**.
- Engineered **Service-Mesh**, a service dependency visualization tool with an optimized tree-structured UI mapping **100+ microservices**, utilizing daily tracking instrumentation to slash engineering debugging time by **30%** for a team of **200+ engineers**.
- Optimized runtime web performance and state management architecture across **12+ high-traffic product modules** by modularizing global Redux slices and leveraging **New Relic** telemetry to identify and eliminate redundant layout re-renders.
- Designed a centralized Alert Management Console and configuration dashboard tracking over **500+ system threshold metrics**, integrating **Sentry** exception reporting to monitor real-time errors and orchestrate receiver notifications across **50+ alerting channels**.
- Established automated testing workflows executing **1,200+ assertions** across core repository distribution branches using **Jest** and **Playwright** inside **GitLab CI/CD** pipelines to drastically boost production deployment confidence.

Software Development Engineer @ OLA

Dec 2021 – Feb 2024 | Bengaluru

- Improved the UI/UX architecture of the core Driver Onboarding Platform operating across **100+ cities** using **React** and modular view containers, reducing total onboarding cycle time by **20%** and boosting satisfaction metrics by **15%**.
- Scaled the operational Command Center built on **Next.js** for EV fleet management tracking **50K+ active vehicles**, rendering real-time incoming telemetry data loops and complex geospatial analytical charting panels.
- Spearheaded the wide-scale platform migration from Google Maps API to the internal **Ola Maps SDK** across all major consumer web applications **serving 30M+ active users**, directly reducing mapping-related infrastructure costs by **25%**.
- Implemented a secure, multi-layered Time-Geo-Fence module processing **2M+ daily location pings** with advanced time and area-based access controls, combining map primitive overlays with accurate location tracking arrays.

EDUCATION

The National Institute of Engineering, Mysuru

Aug 2016 – Oct 2020

Bachelor of Engineering (B.E.) in Mechanical Engineering

Masai School

Mar 2021 – Nov 2021

Advanced Certification in Full Stack Web Development
